## Preface

Dear customer,

Thank you very much for purchasing a product made by OPTIMUM.

OPTIMUM metal working machines offer a maximum of quality, technically optimum solutions and convince by an outstanding price performance ratio. Continuous enhancements and product innovations guarantee state-of-the-art products and safety at any time.

Before commissioning the machine please thoroughly read these operating instructions and get familiar with the machine. Please also make sure that all persons operating the machine have read and understood the operating instructions beforehand.

Keep these operating instructions in a safe place nearby the machine.

### Information

The operating instructions include indications for safety-relevant and proper installation, operation and maintenance of the machine. The continuous observance of all notes included in this manual guarantee the safety of persons and of the machine.

The manual determines the intended use of the machine and includes all necessary information for its economic operation as well as its long service life.

In the paragraph "Maintenance" all maintenance works and functional tests are described which the operator must perform in regular intervals.

The illustration and information included in the present manual can possibly deviate from the current state of construction of your machine. Being the manufacturer we are continuously seeking for improvements and renewal of the products. Therefore, changes might be performed without prior notice. The illustrations of the machine may be different from the illustrations in these instructions with regard to a few details. However, this does not have any influence on the operability of the machine.

Therefore, no claims may be derived from the indications and descriptions. Changes and errors are reserved!

Your suggestion with regard to these operating instructions are an important contribution to optimising our work which we offer to our customers. For any questions or suggestions for improvement, please do not hesitate to contact our service department.

**If you have any further questions after reading these operating instructions and you are not able to solve your problem with a help of these operating instructions, please contact your specialised dealer or directly the company OPTIMUM.**

Optimum Maschinen Germany GmbH

## 1 Safety

### Glossary of symbols

- |  |                               |
|--|-------------------------------|
|  | provides further instructions |
|  | calls on you to act           |
|  | enumerations                  |

This part of the operating instructions

- explains the meaning and use of the warning notes included in these operating instructions,
- defines the intended use of the drilling machine,
- points out the dangers that might arise for you or others if these instructions are not observed,
- informs you about how to avoid dangers.

In addition to these operation instructions, please observe

- the applicable laws and regulations,
- the statutory provisions for accident prevention,
- the prohibition, warning and mandatory signs as well as the warning labels on the drilling machine.

When installing, operating, maintaining and repairing the drilling machine it is necessary to observe the European standards.

If European standards have not yet been incorporated in the national legislation of the country of destination, the specific applicable regulations of each country must be observed.

If applicable, necessary measures must be taken to comply with the country-specific regulations before commissioning the drilling machine.

**Always keep this documentation close to the drilling machine.**

### INFORMATION

If you are unable to rectify an issue using these operating instructions, please contact us for advice:

## 1.1 Safety instructions (warning notes)

### 1.1.1 Classification of hazards

We classify the safety warnings into different categories. The table below gives an overview of the classification of symbols (ideogram) and the warning signs for each specific danger and its (possible) consequences.

Symbol	Warning alert	Definition / consequence
	DANGER!	Impending danger that will cause serious injury or death to people.
	WARNING!	A danger that can cause serious injury or death.
	CAUTION!	A danger or unsafe procedure that can cause personal injury or damage to property.
	ATTENTION!	Situation that could cause damage to the machine and product and other types of damage. No risk of injury to people.
	INFORMATION	Practical tips and other important or useful information and notes. No dangerous or harmful consequences for people or objects.

In case of specific dangers, we replace the pictogram with

general danger

with a warning  
of

injury to hands,

or

hazardous electrical  
voltage,

rotating parts.

### 1.1.2 Other pictograms

Activation forbidden!

Pull the main plug!

Wear protective  
glasses!

Use ear protection!

Wear protective  
gloves!

Wear protective  
boots!

Wear a protective  
suit!

Protect the environ-  
ment!

Contact address

## 1.2 Intended use

The drilling machine is designed and manufactured for holes in cold metals or other non flammable materials or that not constitute a health hazard using a rotating filing-stripping tool that has a number of grooves for collecting the filings.

The drilling machine may only be operated with tools whose cutting edge arrangement forms a force couple around the rotational axis in engagement.

A quick-action drill chuck for holding the tools is provided as standard. The drilling machine must only be used with a quick-action drill chuck.

If the drilling machine is used in any way other than described above, modified without the Operations approval of the company Optimum Maschinen Germany GmbH then the drilling machine is not in accordance with intended use!

We will not be held liable for any damages resulting from any operation which is not in accordance with the intended use.

We expressly point out that the guarantee or CE conformity will expire, if any constructive, technical or procedural changes are not performed by the company Optimum Maschinen Germany GmbH.

It is also part of intended use that you

- observe the limits of the drilling machine, "Technical data" on page 19
- the operating manual is observed,
- the inspection and maintenance instructions are observed.

### WARNING!

**Extremely severe injuries.**

**It is forbidden to make any modifications or alternations to the operation values of the drilling machine! They could endanger the personnel and cause damage to the drilling machine.**

### INFORMATION

The drilling machine B23Pro Vario, B26Pro Vario, B33Pro Vario is built according to the standard EN 61800-3 class C2.

### WARNING!

**The class C2 (machine tools) is not intended to be used in residential facilities, where the power is supplied via a public low voltage supply system. In these areas it may possibly be difficult to guarantee electromagnetic compatibility due to lead bound as well as emitted interferences.**

### ATTENTION!

**If the drilling machine is not used as intended or if the safety directives or the operating instructions are ignored the liability of the manufacturer for any damages to persons or objects resulting hereof is excluded and the claim under guarantee is becoming null and avoid!**

## 1.3 Reasonably foreseeable misuse

Any other use other than that specified under "Intended use" or any use beyond the described use shall be deemed as non-intended use and is not permissible.

Any other use has to be discussed with the manufacturer.

It is only allowed to process metal, cold and non-inflammable materials with the drilling machine.

In order to avoid misuse, it is necessary to read and understand the operating instructions before first commissioning.

Operators must be qualified.

## INFORMATION

The drilling machine with frequency converter for regulating the speed is built according to the standard EN 61800-3 class C2.

## WARNING!

**This machine is not intended for use in residential buildings, in which the power supply is provided via a public low voltage supply system. In these areas it may possibly be difficult to guarantee electromagnetic compatibility due to lead bound as well as emitted interferences.**

### Overview of the EMC categories:

#### Categorie C1

- required limit values Class B Group 1 according to EN 55011

#### Categorie C2

- Required limit values class A Group 1 according to EN 55011, Installation by EMC experts and warning: "This is a product of category C2 according to EN 61800-3. This product may cause radio interference in a residential area. In this case, it may be necessary for the operator to take appropriate action."

#### Categorie C3

- Required limit values class A group 2 according to EN 55011, whereby these limit values are below those of class A group 1, plus warning: „This type is not suitable for connection to a public low-voltage network supplying residential buildings. When connecting to a public low voltage network, radio frequency interference is expected.“

B23Pro Vario	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
B26Pro Vario				
B33Pro Vario				
Categorie	C1	C2	C3	C4
Environment	Residential area Business area Industrial area		Industrial area	
Voltage / Current	< 1000 V			> 1000 V
EMC knowledge	no requirement	Installation and commissioning by an EMC expert		

### 1.3.1 Avoiding misuse

- Use of suitable cutting tools.
- Adapting the speed adjustment and feed to the material and workpiece.
- Clamp workpieces firmly and free of vibration.

## ATTENTION!

The workpiece is always to be fixed by a machine vice, jaw chuck or by another appropriate clamping tool such as for the clamping claws.

## WARNING!

Risk of injury caused by flying workpieces.

Clamp the workpiece in the machine vice. Make sure that the workpiece is firmly clamped in the machine vice and that the machine vice is firmly clamped onto the machine table.

- Use cooling and lubricating agents to increase the durability of the tool and to improve the surface quality.
- Clamp the cutting tools and workpieces on clean clamping surfaces.
- Sufficiently lubricate the machine.
- Correctly adjust the bearing clearance and the guidings.

Recommendations:

- Insert the drill in a way that it is exactly positioned between the three clamping jaws of the quick action chuck.

When drilling make sure that

- the suitable speed is set depending on the diameter of the drill,
- the pressure must only be such that the drill can cut without load,
- if there is too much pressure, the drill will wear quickly and may even break or jam in the borehole. If the drill gets jammed immediately stop the main motor by pressing the emergency stop button,
- for hard materials, e.g. steel, use commercial cooling / lubricating agents,
- generally always back the spindle out of the workpiece while it is still turning.

## 1.4 Possible dangers caused by the drilling machine

The drilling machine has undergone a safety inspection (analysis of danger with assessment of risks). It has been designed and built on the basis of this analysis using the latest technological advances.

Nevertheless, there is a residual risk as the drilling machine operates with

- at high speeds,
- rotating parts,
- electrical voltage and currents.

We have used construction resources and safety techniques to minimize the health risk to personnel resulting from these hazards.

If the drilling machine is used and maintained by personnel who are not duly qualified, there may be a risk resulting from incorrect or unsuitable maintenance of the drilling machine.

## INFORMATION

Everyone involved in the assembly, commissioning, operation and maintenance must

- be duly qualified,
- and strictly follow these operating instructions.

In the event of improper use

- there may be a risk to personnel,
- there may be a risk to the machine and other material values,
- the correct function of the drilling machine may be affected.

Disconnect the drilling machine whenever cleaning or maintenance work is being carried out.

## WARNING!

**The drilling machine may only be used with functional safety devices.**

**Disconnect the drilling machine immediately, whenever you detect a failure in the safety devices or when they are not fitted! "Safety devices" on page 13**

**All additional devices installed by the operator have to be equipped with the prescribed safety devices.**

**This is your responsibility being the operating company!**

## 1.5 Qualification of personnel

### 1.5.1 Target group

This manual is addressed to

- the operating companies,
- the operators,
- the maintenance personnel.

Therefore, the warning notes refer to both, operation and maintenance personnel of the drilling machine.

Determine clearly and explicitly who will be responsible for the different activities on the machine (operation, maintenance and repair).

Unclear responsibilities constitute a safety risk!

Always disconnect plug of the drilling machine from the electrical power supply. This will prevent it from being used by unauthorized persons.

#### Operator

The operator has been instructed by the operating company regarding the assigned tasks and possible risks in case of improper behaviour. Any tasks which need to be performed beyond the operation in standard mode must only be performed by the operator, if so indicated in these instructions and if the operator has been expressively commissioned by the operating company.

#### Qualified electrician

With professional training, knowledge and experience as well as knowledge of respective standards and regulations, qualified electricians are able to perform work on the electrical system and recognise and avoid any possible dangers.

Qualified electricians have been specially trained for the working environment, in which they are working and know the relevant standards and regulations.

#### Qualified personnel

Thanks to professional training, knowledge and experience as well as knowledge of relevant regulations the qualified personnel is able to perform the assigned tasks and to independently recognise and avoid any possible dangers themselves.

#### Instructed person

Instructed persons were instructed by the operating company regarding the assigned tasks and any possible risks of improper behaviour.

### 1.5.2 Authorized personnel

#### WARNING!

**Inappropriate operation and maintenance of the drilling machine constitutes a danger for the personnel, objects and the environment.**

**Only authorized staff may operate the drilling machine!**

Persons authorized to operate and maintain should be trained technical personnel and instructed by the ones who are working for the operating company and for the manufacturer.

#### The operating company must

- train the personnel,

Obligations of  
the operating  
company

- instruct the personnel in regular intervals (at least once a year) on
  - all safety standards that apply to the machine,
  - the operation,
  - generally accepted engineering standards.
- check the personnel's knowledge level,
- document the training/instruction,
- require personnel to confirm participation in training/instructions by means of a signature,
- check whether the personnel is working safety and risk-conscious and observes the operating instructions.

### The operator must

- have obtained a training regarding the handling of the drilling machine,
- know the function and mode of action,
- before taking the machine in operation
  - have read and understood the operating manual,
  - be familiar with all safety devices and instructions.

Obligations of the operator

Additional requirements apply for work on the following machine components:

- Electric components or operating materials: Must only be worked on by a qualified electrician or person working under the instructions and supervision of a qualified electrician.

Additional requirements regarding the qualification

Before starting work on electrical parts or operating agents, following measures are to be performed in the following order:

- disconnect all poles
- secure against restarting
- check that there is no voltage

## 1.6 Operator positions

The operator's position is in front of the drilling machine.

### INFORMATION

The main switch of the geared drill must be freely accessible.

## 1.7 Safety measures during operation

### CAUTION!

Danger due to inhaling dust and mist that is hazardous to health.

Dependent on the material which need to be processed and the used auxiliaries dusts and mist may be caused which might impair you health.

Make sure that the generated health hazardous dusts and mist are safely sucked off at the point of origin and is dissipated or filtered from the working area. To do so, use a suitable extraction unit.

### CAUTION!

Risk of fire and explosion by using flammable materials or cooling lubricants.

Before processing inflammable materials (e.g. aluminium, magnesium) or using inflammable auxiliary materials (e.g. spirit) it is necessary to take additional preventive measures in order to safely avoid health risks.

## 1.8 Safety devices

Use the drilling machine only with properly functioning safety devices.

Stop the drilling machine immediately if there is a failure on the safety device or if it is not functioning for any reason.

It is your responsibility!

If a safety device has been activated or has failed, the drilling machine must only be used if you

- the cause of the fault has been eliminated,
- have verified that there is no danger resulting for the personnel or objects.

## WARNING!

If you bypass, remove or deactivate a safety device in any other way, you are endangering yourself and other personnel working with the drilling machine. The possible consequences are:

- injuries due to components or parts of components flying off at high speed,
- contact with rotating parts,
- fatal electrocution,

The drilling machine includes the following safety devices:

- an EMERGENCY STOP push button,
- a protective cover of the pulleys with positioning switch,
- a drill chuck protection with positioning switch,
- a drilling table with T-slots to fix the workpiece or a vice.

## WARNING!

The separating protective equipment which is made available and delivered together with the machine is designed to reduce the risk of workpieces or fractions of them which being expelled, but not to remove them completely. Always work carefully and observe the limits of their machining process.

## 1.9 EMERGENCY-STOP push button

### ATTENTION!

Also after actuating the EMERGENCY-STOP switch, the drilling spindle is turning - depending on the previously selected speed - for a few seconds more.

Img.1-1: EMERGENCY-STOP push button

## 1.10 Separating protective devices

### 1.10.1 Covering cap of the pulley

A covering cap for the pulleys is mounted on the drilling head.

A switch is integrated in the protective cover which monitors that the closed position.

### INFORMATION

B17\_B23\_B26\_B33\_GB\_1.fm

It is not possible to start the machine until the protective cover is closed.

Img. 1-2: Protective cover

### 1.10.2 Drill chuck protection

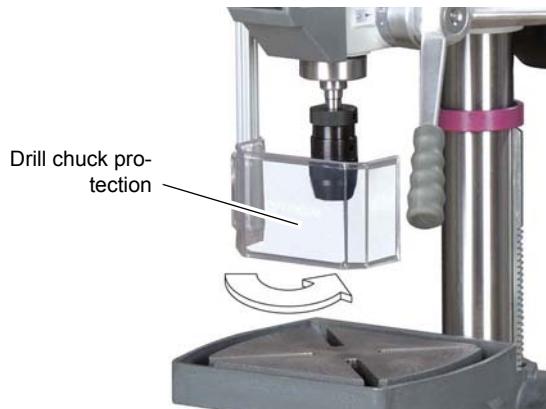

Adjust the protective equipment to the correct height before you start working.

To do so, detach the clamping screw, adjust the required height and re-tighten the clamping screw.

A switch is integrated in the fixture of the spindle protection which monitors that the cover is closed.

#### INFORMATION

You cannot start the machine if the drill chuck protection is not closed.

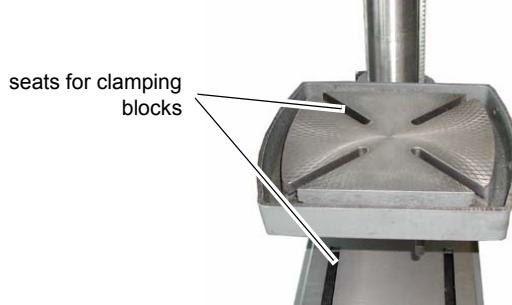

Img. 1-3: Drill chuck protection

### 1.11 Drilling table

Seats for T-slots are attached to the drilling table.

#### WARNING!

**Risk of injury due to parts flying off at high speed. Securely fix the workpiece on the drilling table.**

Img. 1-4: Drilling table

### 1.12 Prohibition, warning and mandatory signs

#### INFORMATION

All warning signs must be legible. They must be checked regularly.

### 1.13 Safety check

Check the drilling machine at least once per shift. Inform the person responsible immediately of any damage, defects or changes in the operating function.

Check all safety devices

- at the beginning of each shift (with the machine stopped),
- once a week (with the machine in operation),
- after all maintenance and repair work.

Check that prohibition, warning and information signs and the labels on the drilling machine.

- are legible (clean them, if necessary)
- are complete.

#### INFORMATION

Organise the checks according to the following table;

General check		
Equipment	Check	OK
Protective cover	Mounted and securely tightened	
Signs, Markers	Installed and legible	
Date:	checked by (signature):	

Functional check		
Equipment	Check	OK
EMERGENCY-STOP push button	After actuating an EMERGENCY STOP push button the drilling machine must be switched off.	
Drill chuck protection	Once the emergency stop button is activated, the bench drilling machine should be switched off. The drilling machine may not start if the drill chuck protection is open.	
Position switch V-belt cover	When the V-belt cover is opened, the drill must switch off automatically. The drilling machine may not start if the V-belt cover is open.	
Date:	checked by (signature):	

## 1.14 Personal protective equipment

For some works you need personnel protective equipment as protective equipment. This includes:

- Safety helmet,
- protective glasses or face guard,
- protective gloves,
- safety shoes with steel toe caps,
- ear protection.

Before starting work make sure that the required personnel protective equipment is available at the work place.

### CAUTION!

**Dirty or contaminated personnel protective equipment can cause illness.**

#### Clean your personal protective equipment

- after each use,
- regularly once a week.

#### Personal protective equipment for special works

Protect your face and your eyes: Wear a safety helmet with facial protection when performing work where your face and eyes are exposed to hazards.

Use protective gloves when handling pieces with sharp edges.

Wear safety shoes when you assemble, disassemble or transport heavy components.

## 1.15 Safety during operation

We specifically point out the dangers when describing the work with and on the drilling machine.

### WARNING!

**Before switching on the drilling machine make sure that there are**

- no dangers generated for persons,**
- no objects are damaged.**

Avoid any unsafe work methods:

- Make sure that your work does not endanger anyone.
- The instructions mentioned in these operating instructions have to be strictly observed during assembly, operation, maintenance and repair.
- Do not work on the drilling machine, if your concentration is reduced, for example, because you are taking medication.
- Observe the accident prevention regulations issued by your Employers Liability Insurance Association or other supervisory authorities responsible for your company.
- Inform the supervisor about all hazards or faults.
- Use the prescribed personnel protective equipment. Make sure to wear a well-fitting work suit and, if necessary, a hairnet.
- Do not use protective gloves when drilling.

## 1.16 Safety during maintenance

Inform the operators in good time of any maintenance and repair works.

Report all safety relevant changes and performance details of the drilling machine or their operational behaviour. Any changes must be documented, the operating instructions updated and machine operators instructed accordingly.

Report and document any changes

### 1.16.1 Disconnecting and securing the drilling machine

Unplug the main switch before starting any maintenance or repair work. All machine components and hazardous voltages and movements must have been disconnected.

Attach a warning sign on the machine.

### 1.16.2 Using lifting equipment

#### WARNING!

**The use of unstable lifting and load suspension equipment that might break under load can cause severe injuries or even death.**

**Check that the lifting and load suspension gear devices**

- they have sufficient load carrying,**
- and that it is in perfect condition.**

**Observe the accident prevention regulations issued by your Employers Liability Insurance Association or other supervisory authorities responsible for your company.**

**Fasten the loads properly.**

**Never walk under suspended loads!**

### 1.16.3 Mechanical maintenance work

Remove or install protection safety devices before starting or after completing any maintenance work; this include:

- covers,
- safety instructions and warning signs,
- grounding cables.

If you remove protection or safety devices, refit them immediately after completing the work.

Check if they are working properly!

### 1.17 Accident report

Inform your supervisors and Optimum Maschinen Germany GmbH immediately in the event of accidents, possible sources of danger and any actions which almost led to an accident (near misses).

There are many possible causes for "near misses".

The sooner they are notified, the quicker the causes can be eliminated.

### INFORMATION

We provide information about the dangers of working with and on the drilling machine in these work descriptions.

### 1.18 Electrical system

"Maintenance" on page 42

Have the machine and/or the electric equipment checked regularly. Check the electrical system according to DIN EN 60204.

Immediately eliminate all defects such as loose connections, defective wires, etc.

A second person must be present during work on live components to disconnect the power in the event of an emergency.

Immediately disconnect the drilling machine if there are any anomalies in the power supply!

## 2 Technical data

The following information represents the dimensions and indications of weight and the manufacturer's approved machine data for following stated machines.

B17Pro	B23Pro	B23Pro Vario	B26Pro	B26Pro Vario	B33Pro	B33Pro Vario
<b>2.1 Electrical connection</b>

## 2.18 Emissions

The generation of noise emitted by the drilling machine is 73 dB(A) at idle. If the drilling machine is installed in an area where various machines are in operation, the noise exposure (immission) on the operator of the drilling machine at the working place may exceed 80 dB(A).

### INFORMATION

This numerical value was measured on a new machine under the operating conditions specified by the manufacturer. The noise behaviour of the machine might change depending on the age and wear of the machine. Furthermore, the noise emission also depends on production engineering factors, e.g. speed, material and clamping conditions.

### INFORMATION

The specified numerical value represents the emission level and does not necessarily a safe working level. Though there is a dependency between the degree of the noise emission and the degree of the noise disturbance it is not possible to use it reliably to determine if further precaution measures are required or not.

The following factors influence the actual degree of the noise exposure of the operator:

- **Characteristics of the working area, e.g. size or damping behaviour,**
- other noise sources, e.g. the number of machines,
- other processes taking place in proximity and the period of time, during which the operator is exposed to the noise.

Furthermore, it is possible that the admissible exposure level might be different from country to country due to national regulations.

This information about the noise emission should, however, allow the machine operator to evaluate the hazards and risks more easily.

### CAUTION!

**Depending on the total noise exposure and the basic threshold values, machine operators must wear appropriate hearing protection.**

**We generally recommend the use of noise protection and hearing protection.**

## 3 Assembly

### INFORMATION

The drilling machine comes disassembled due to packaging reasons.

Before commissioning, the drilling machine has to be assembled.

### 3.1 Scope of delivery

When the machine is delivered, check immediately that the drilling machine has not been damaged during transport and that all components are included. Take all parts off the box and compare them to the following list.

- Drill head
- Drilling table
- Base
- Upright component (table support pre-assembled)
- Quick-action drill chuck
- Clamping lever
- Crank handle
- Levers for spindle sleeve feed
- Operating manual

### 3.2 Transport

- Centres of gravity
- Load suspension points  
(Marking of the positions for the load suspension point)  
mittel)
- Prescribed transportation position  
(Marking of the top surface)
- Means of transport to be used
- Weights

#### WARNING!

Severe or fatal injuries may occur if parts of the machine tumble or fall down from the forklift truck or from the transport vehicle. Follow the instructions and information on the transport box.

#### WARNING!

The use of unstable lifting and load suspension equipment that might break under load can cause severe injuries or even death.

Check that the lifting and load suspension gear has sufficient load capacity and that it is in perfect condition. Observe the accident prevention regulations issued by your Employers Liability Insurance Association or other supervisory authorities responsible for your company.

Fasten the loads properly. Never walk under suspended loads!

## 3.3 Installation and assembly

### 3.3.1 Requirements regarding the installation site

Organize the working area around the drilling machine according to the local safety regulations.

#### INFORMATION

In order to attain good functionality and a high processing accuracy as well as a long service life of the machine, the place of installation should fulfil certain criteria.

#### Please observe the following points:

- The device must only be installed and operated in a dry and well-ventilated place.
- Avoid places nearby machines generating chips or dust.
- The installation site must be free from vibrations also at a distance of presses, planing machines, etc.
- The substructure must be suitable for the drilling machine. Also make sure that the floor has sufficient load bearing capacity and is level.
- The substructure must be prepared in a way that possibly used coolant cannot penetrate into the floor.
- Any parts sticking out such as stops, handles, etc. have to be secured by measures taken by the customer if necessary in order to avoid endangerment of persons.
- Provide sufficient space for the personnel preparing and operating the machine and transporting the material.
- Also make sure the machine is accessible for setting and maintenance works.
- Provide for sufficient backlight (Minimum value: 500 lux, measured at the tool tip). At lower illumination intensities, additional illumination has to be ensured e.g. by means of a separate workplace lamp.

#### INFORMATION

The main switch of the geared drill must be freely accessible.

### 3.3.2 Assembly

#### WARNING!

**Danger of crushing when assembling and installing the machine components.**

☞ "Qualification of personnel" on page 12

**The drilling machine must be installed by at least 2 people, because various elements and individual parts have to be sustained and joined during assembly.**

#### INFORMATION

The following description of the assembly refers to the B26Pro drilling machine. It has been chosen for description of the following operations because of its close similarity with the drilling machines.

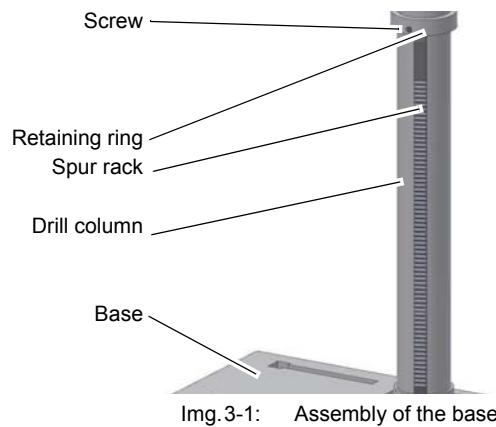

- B17Pro
- B23Pro
- B33Pro

gewählt.

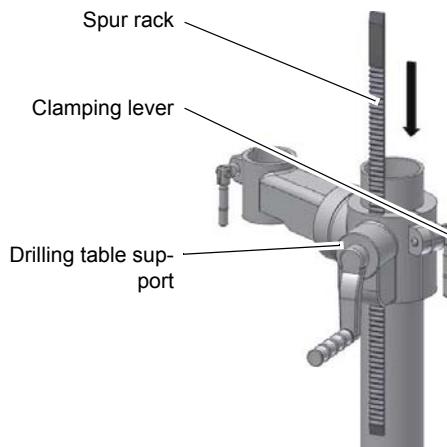

## Mounting of base and drill column

- Position the base on the floor and attach the column to the base. Fastening screws for the drilling pillar have been provided on the base.
- Loosen the screw on the retaining ring and remove the retaining ring and toothed rack.

## Mounting of the drilling table support

- Position the worm gear in the support of the drilling table.
- Adjust the toothed rack within the drilling table support in a way that the teeth of the toothed rack cam into the spiral wheel of the support for the drilling table support.

Img.3-2: Mounting of the drilling table support

## INFORMATION

The longer untoothed end of the rack must point upward.

- Push the drilling table support with the toothed rack on the drill column.
- Push the supporting ring onto the upright and the rack.
- Tighten the screw of the supporting ring slightly. Make sure that the drilling table support still can be easily turned around the upright.
- Attach the clamping lever for drilling table fastening.

## Mount the drilling head

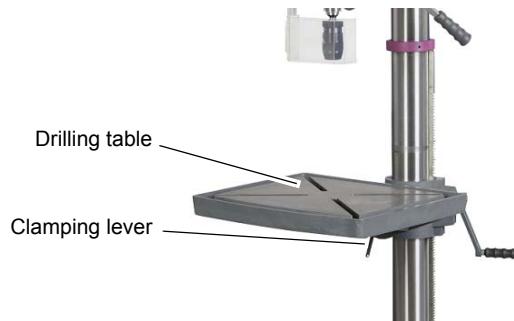

- Place the drill head on the drill upright and turn it until it is aligned with the base. Immobilise the drill head with the two headless screws in the drill head over the toothed rack.
- Screw in the 3 levers of the spindle sleeve feed and attach the crank of the table height adjustment.

Img.3-3: B26Pro

- Insert the drilling table in the drilling table support and clamp it with the clamping lever.

Img.3-4: B26Pro

### Fitting the quick-action drill chuck

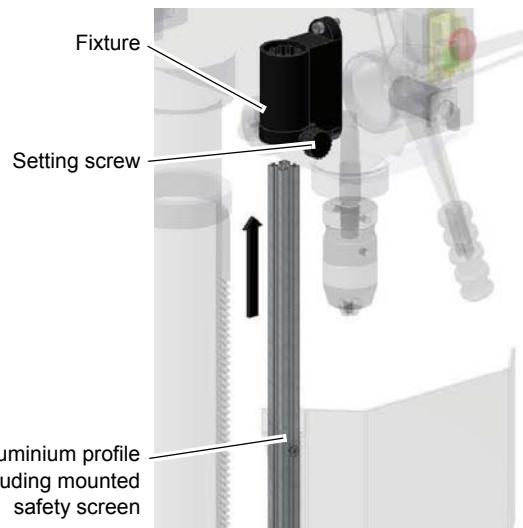

☞ "Assembly quick-action drill chuck" on page 40

### Assembly of the drill chuck protection

#### **WARNING!**

Never operate drilling machines without drill chuck protection.

1. Shift the aluminium profile including the mounted safety screen (plastic screen) into the fixture which is mounted on the drilling head.
2. After assembly of the aluminium profile screw down the setting screw.

Img.3-5: Assembly 1

3. Screw the hexagon socket screw with the locking washer into the aluminium profile.

#### **WARNING!**

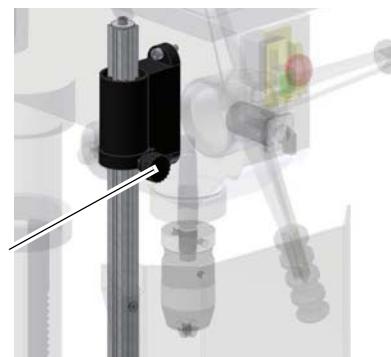

Make sure that the hexagon socket screw and the locking washer are mounted and tightly screwed. Otherwise the aluminium profile would slide out of the fixture when the setting screw is screwed off.

Img.3-6: Assembly 2

4. Make sure that the setting screw shows to the front after assembly and if the drill chuck protection is closed.

Img.3-7: Assembly-3

## INFORMATION

A switch is integrated into the fixture of the spindle protection which monitors that the cover is closed. You cannot start the machine if the drill chuck protection is not closed.

## 3.4 Installation

Check the horizontal orientation of the base of the drilling machine with a spirit level.

Fix the foot of the drilling machine to the substructure with the provided through-holes.

The installation site must be designed in accordance with ergonomic workplace requirements.

### ATTENTION!

**Tighten the setscrews on the drilling machine only until it is firmly secured and can neither move during operation nor be turned over.**

If the setscrews are too tight and the base is uneven, the base plate of the drilling machine may break.

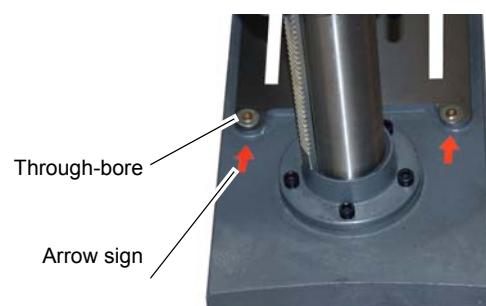

### 3.4.1 Fixing

In order to provide for the necessary stability of the bench drill machine and the upright drilling machine it is necessary to firmly bolt the base of the machine to the subsurface.

We recommend you to use shear connector cartridges resp. heavy-duty anchors.

→ Fix the foot of the drilling machine to the substructure with the provided through-holes.

The Through-bore are marked with arrows on the machine base.

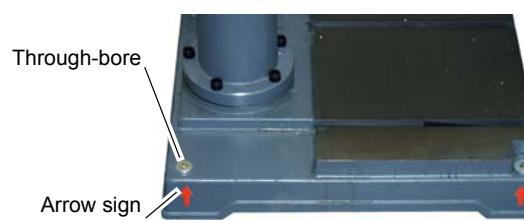

Img.3-8: Marking of the fixing points of the bench drill machines

**ATTENTION!**

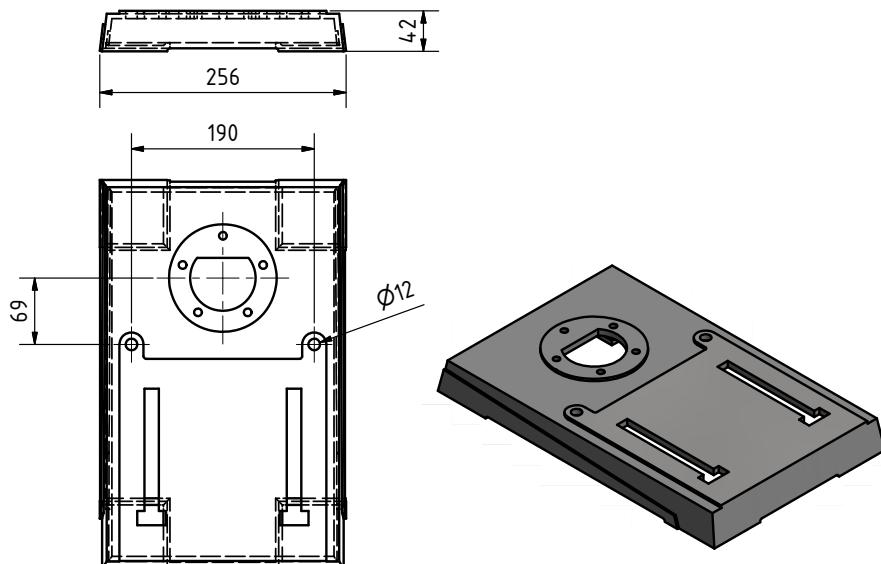

Tighten the fixing screws of the drilling machine only as much that it is safely fixed and cannot break away or tilt over.

If the fixing screws are too tight in particular in connection with an uneven substructure it may result in a broken stand.

Img. 3-9: Marking of the fixing points of the upright drilling machines

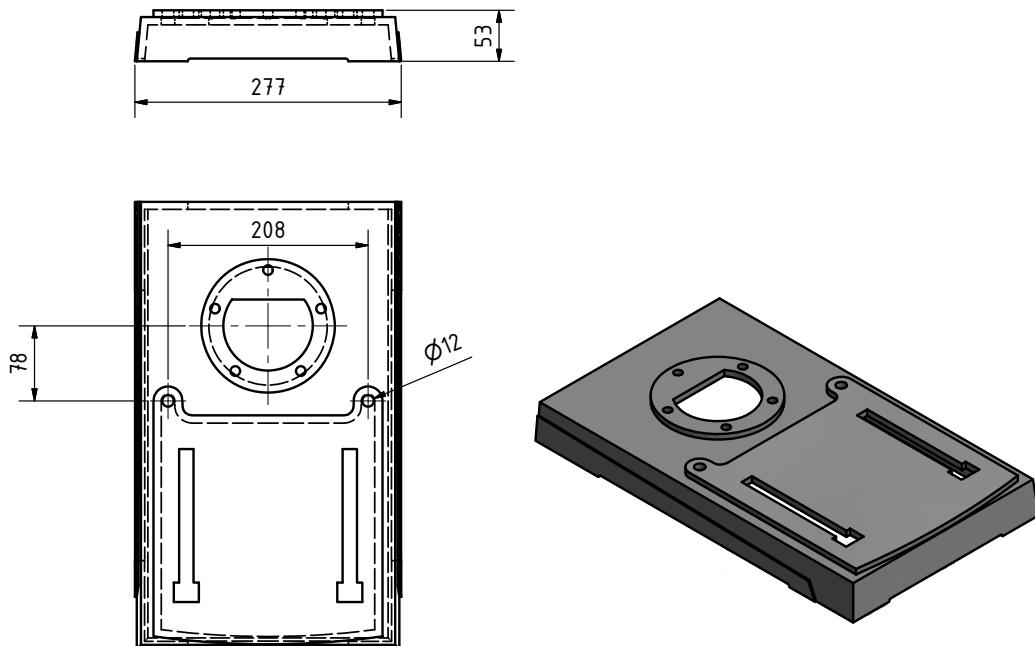

**B17Pro**

Img. 3-10: Fixing of foot B17Pro

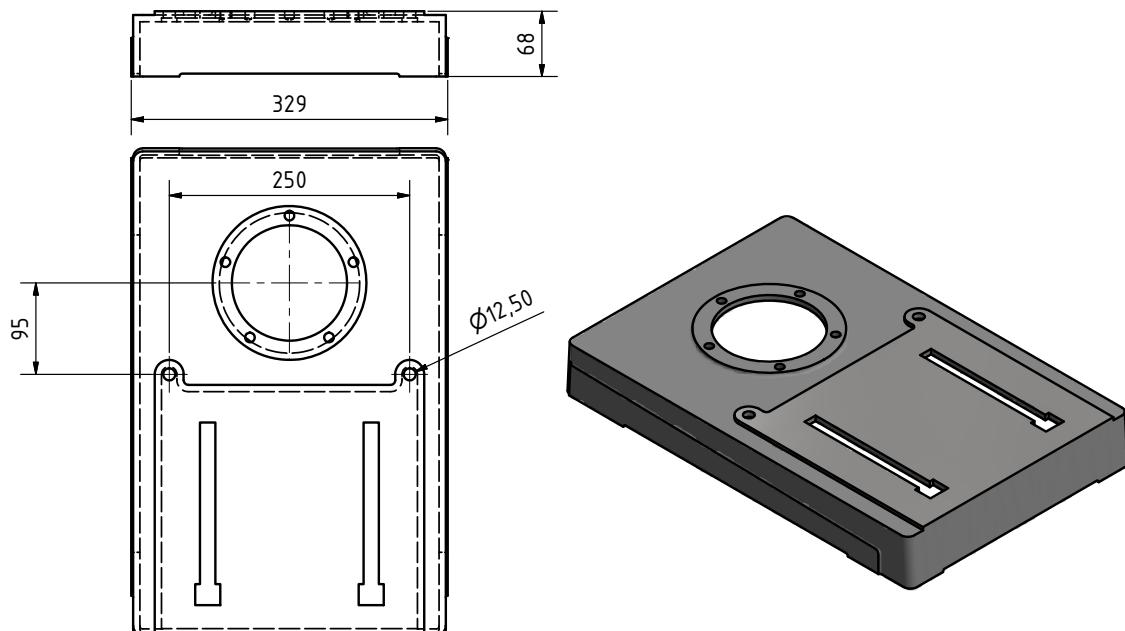

## B23Pro, B23Pro Vario

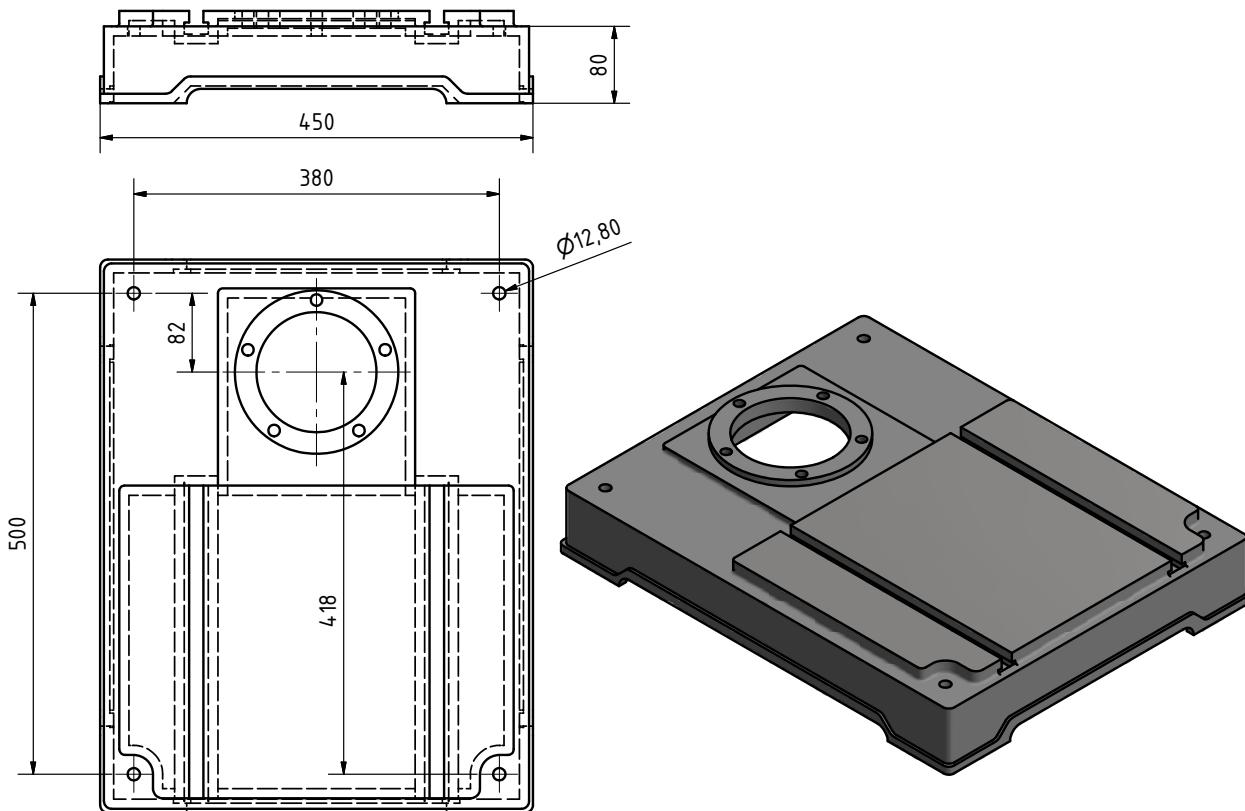

Img.3-11: Fixing of foot B23Pro

## B26Pro, B26Pro Vario

Img.3-12: Fixing of foot B26Pro

Img. 3-13: Fixing of foot B33Pro

### 3.5 First commissioning

#### ATTENTION!

Before initially operating the machine, check all screws, fixtures and/or safety devices and tighten up the screws if necessary!

#### WARNING!

Risk from using improper workpiece clamping materials or operating the machine at an inadmissible speed.

Only use the clamping materials (e.g. drill chuck) which had been delivered together with the machine or as optional equipment offered by OPTIMUM.

Only use tool clamping devices in the intended admissible speed range.

Workpiece clamping materials must only be modified according to the recommendations of OPTIMUM or of the clamping material manufacturer.

#### WARNING!

When first commissioning the drilling machine by inexperienced personnel you endanger people, the machine and the equipment.

We do not accept any liability for damages caused by incorrectly performed commissioning.

## 3.6 Electrical connection

### 3.6.1 Machines without a frequency converter

- Check the fusing (fuse) of your electrical supply according to the technical instructions regarding the total connected power of the drilling machine.
- Mains fusing 10A to 16A

#### CAUTION!

Install the connection cable of the machine in such a way that people will not stumble over it.

#### Three-phase connection

#### ATTENTION!

Ensure that all 3 phases (L1, L2, L3) and the ground wire are connected correctly.

The neutral conductor (N) of its power supply is not connected.

#### ATTENTION!

Make sure that the direction of rotation of the drive motor is correct. The switch position of the rotation selector switch for right-handed rotation (R) has to turn the drill spindle clockwise. If necessary, exchange two phase connections.

The guarantee will become null and void if the machine is connected incorrectly.

### 3.6.2 Machines with frequency converter for speed control

- Check the fusing (fuse) of your electrical supply according to the technical instructions regarding the total connected power of the drilling machine.
- Firmly connect the machine.
- Mains fusing 10A to 16A
- If the tolerances - voltage  $\pm 5\%$ , frequency  $\pm 2\%$ , waveform, symmetry - are exceeded, more heat will be generated and the electromagnetic compatibility will be influenced.

#### CAUTION!

Install the connection cable of the machine in such a way that people will not stumble over it.

Due to the design, the leakage current is greater than 3,5 mA. We ask for due attention while executing machine tests within the framework of industrial safety guidelines.

Firmly connect the machine to the terminal box. It is not allowed to connect the machine using a standard 16A CEE plug, since the stray current of the frequency converter is exceeding the admissible value of 3.5mA (refer to EN 50178 / VDE 5.2.11.1).

#### ATTENTION!

Frequency converters (drive regulators) might trigger the FI circuit breaker of your electrical supply. In order to avoid malfunction, an FI circuit breaker switch sensitive to pulse current or to universal current may be required.

**CAUTION!**

The discharge current to earth (PE) is > 3.5 mA AC or 10 mA DC.

**Protective measures:**

Implement the measures required in EN 61800-5-1.

- Fixed installation
- PE connection must comply with standards (PE conductor diameter 10 mm<sup>2</sup> (Cu) or PE conductor must be connected twice)

Since a direct current may be caused by the frequency converter in the protective earthing conductor, if an upstream residual current device (ELCB / RCD) is required in the network, the following guidelines must be followed:

There are three common types of FI (ELCB / RCD):

- AC - to detect AC fault currents
- A - to detect AC fault currents and pulsating DC fault currents (provided the DC current reaches zero at least once every half cycle).
- B - to detect AC fault currents, pulsating DC fault currents and smooth DC residual currents.

Type AC should never be used in converters.

Type A can only be used for single-phase converters.

Type B must be used for 3-phase converters.

### 3.6.3 Warming up the machine

**ATTENTION!**

If the drilling machine and in particular the drilling spindle is immediately operated at maximum load when it is cold it may result in damages.

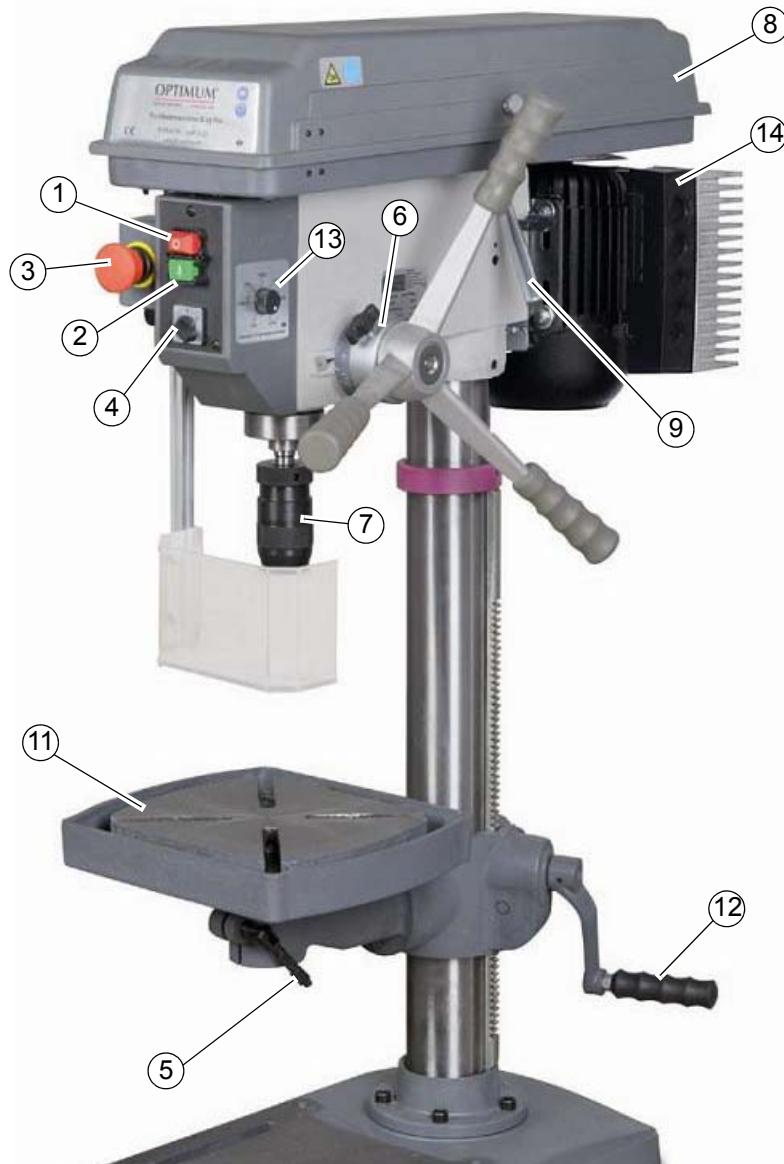

If the machine is cold, e.g. directly after having transported the machine, it should be warmed up at a spindle speed of only 500 1/min for the first 30 minutes.

## 4 Operation

### 4.1 Control and indicating elements

Img.4-1: B23Pro Vario

Pos.	Designation	Pos.	Designation
1	Push button "OFF"	2	Push button "ON"
3	EMERGENCY-STOP button	4	Rotation direction switch (only on 400V machines)
5	Clamping lever	6	Scale of drill depth stop
7	Quick-action drill chuck	8	Protective cover of V-belt housing
9	Handle for V-belt tension	10	Lever for spindle sleeve feed
11	Drilling table	12	Table height adjustment
13	Potentiometer for speed regulation (only on Vario machines)	14	Frequency converter (only on Vario machines)

## 4.2 Safety

Use the drilling machine only under the following conditions:

- The drilling machine is in proper working order.
- The drilling machine is used as prescribed.
- The operating manual is followed.
- All safety devices are installed and activated.

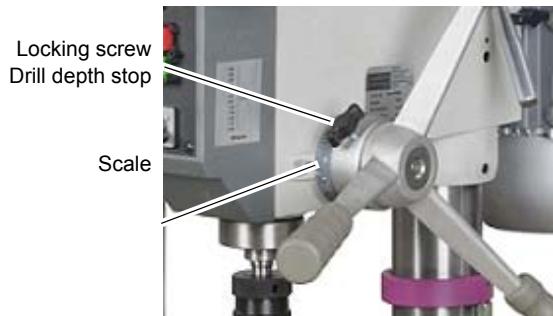

Eliminate or have all malfunctions rectified promptly. Stop the machine immediately in the event of any abnormality in operation and make sure it cannot be started-up accidentally or without authorisation. Notify the person responsible immediately of any modification.

### 4.2.1 Drill depth stop

When drilling several holes of the same depth you can use the drill depth stop.

- Loosen the locking screw and turn the graduated collar until the required drilling depth matches with the indicator.
- Re-tighten the locking screw.

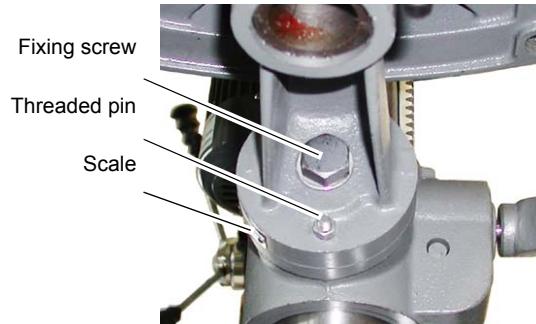

Img.4-2: Scale of drill depth stop

The spindle can now only be lowered to the set depth.

### 4.2.2 Inclination table

The drilling machine table can be inclined to the right or to the left.

- Loosen the fixing screw.
- Pull out the threaded pin.

Img.4-3: Fixing screw

## INFORMATION

If you can not pull out the threaded pin, so the seat can be solved by turning at the nut clockwise.

- Set the desired angle using the scale.
- Re-tighten the fixing screw again.

## INFORMATION

The threaded pin is only provided for correct positioning of a horizontal level of the drilling table.

### 4.3 Speed change

Set the required speed within the range of 15 to 225% using the potentiometer (only on Vario machines). If the required speed is not available, you must change the position of the V-belts.

- Disconnect the machine from the electrical supply.
- Remove the screw fittings on the protective cover of the V-belts.

Img. 4-4: Belt drive

- Open the protective cover.
- Loosen the sliding rail screws on the right and left side of the drill head and shift the motor towards the quick-action drill chuck using the handle.

#### **WARNING!**

**Do not open the cover hood until the drilling machine is disconnected from the electrical supply.**

**Close and screw down the protective cover after any adjustment to the saw belt speed.**

#### **ATTENTION!**

**Watch for the proper tension of V-belts.**

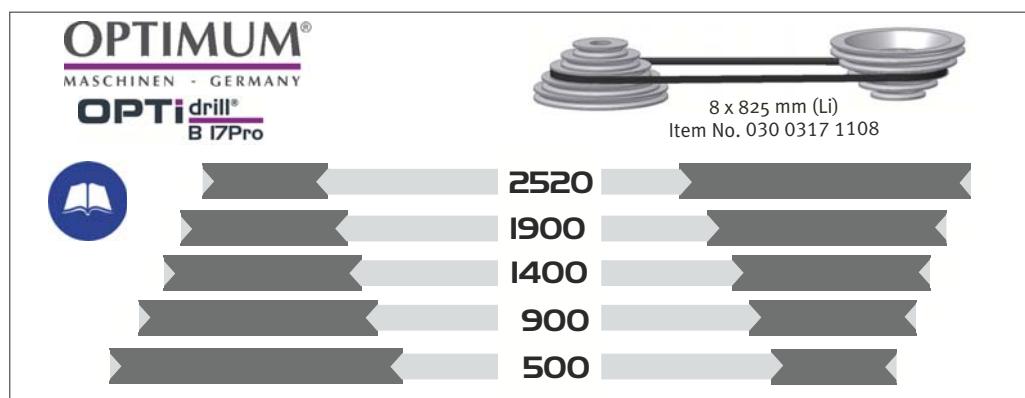

**Too heavy or too low tension of the belt can cause damage.**

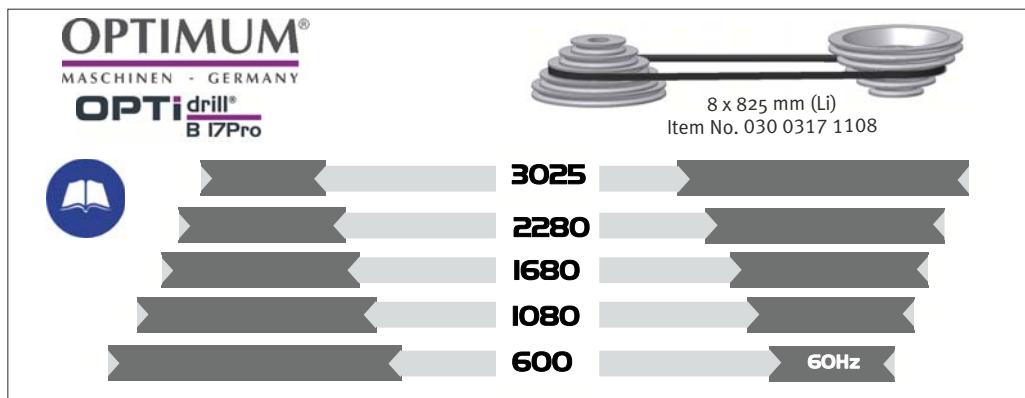

**The belts are correctly tensioned, when it can be by pressing with the fingers for about 1 cm.**

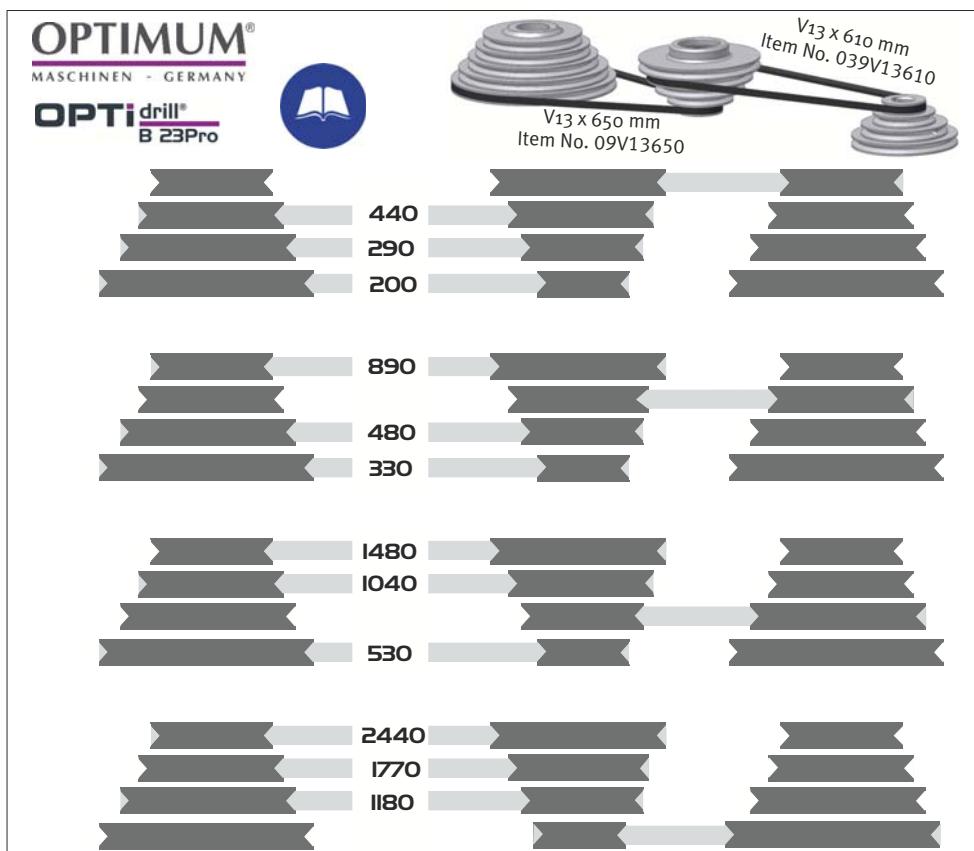

#### 4.3.1 Speed tables

## 4.4 Standard values for speeds with HSS – Eco – twist drilling

Material	Drill diameter										Cooling 3)
	2	3	4	5	6	7	8	9	10		
Steel, unalloyed, up to 600 N/mm <sup>2</sup>	n <sup>1)</sup>	5600	3550	2800	2240	2000	1600	1400	1250	1120	E
	f <sup>2)</sup>	0.04	0.063	0.08	0.10	0.125	0.125	0.16	0.16	0.20	
Structural steel, alloyed, quenched and subsequently drawn, up to 900N/mm <sup>2</sup>	n	3150	2000	1600	1250	1000	900	800	710	630	E/oil
	f	0.032	0.05	0.063	0.08	0.10	0.10	0.125	0.125	0.16	
Structural steel, alloyed, quenched and subsequently drawn, up to 1200 N/mm <sup>2</sup>	n	2500	1600	1250	1000	800	710	630	560	500	Oil
	f <sup>3)</sup>	0.032	0.04	0.05	0.063	0.08	0.10	0.10	0.125	0.125	
Stainless steels up to 900 N/ mm <sup>2</sup> e.g. X5CrNi18 10	n	2000	1250	1000	800	630	500	500	400	400	Oil
	f	0.032	0.05	0.063	0.08	0.10	0.10	0.125	0.125	0.16	

1): Speed [ n ] in r/min  
 2): Feed [ f ] in mm/r  
 3): Cooling: E = Emulsion; oil = cutting oil

- The above mentioned indications are standard values. In some cases it may be advantageous to increase or decrease these values.
- When drilling a cooling or lubricating agent should be used.
- For stainless materials (e.g. VA – or NIRO steel sheets) do not center as the material would compact and the drill bit will become rapidly blunt.
- The workpieces need to be tensed inflexibly and stably (vice, screw clamp).

## 4.5 Switching on the machine

The drilling machine is switched on in the following order.

- Turn the change-over switch into the neutral position (0).
- Push the green push-button, and wait two seconds.
- Turn the change-over switch into the desired direction of rotation. The rotation of spindle starts.

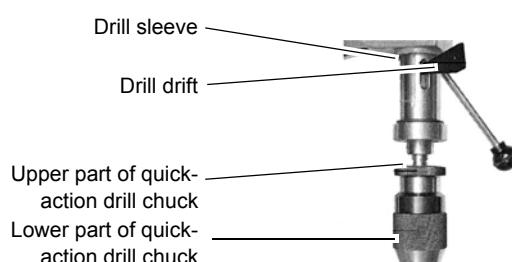

## 4.6 Switching off the machine

- Push the red push-button, or turn the change over switch into the neutral position (0).

## 4.7 Quick-action drill chuck

The bench drilling machine is equipped with a drill chuck.

In order to clamp a drill bit, hold the upper part of the quick-action drill chuck and turn the lower part.

Img.4-5: Quick action - drill chuck

### ATTENTION!

Make sure that the clamped tool is firmly and correctly fitted.

## 4.7.1 Disassembly quick- action drill chuck

The quick-action drill chuck and the taper mandrel are released from the drilling spindle with the aid a drill drift.

### WARNING!

**Do not unfit the quick-action drill chuck until the drilling machine has been disconnected from the power supply.**

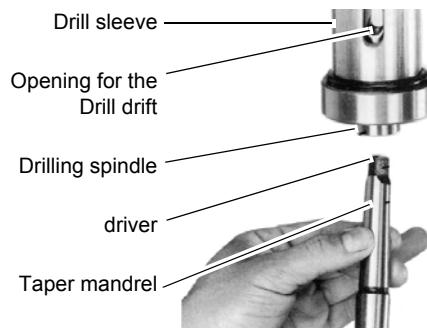

- Disconnect the drilling machine from electrical power supply.
- Move the drill sleeve down.
- Turn the drilling spindle until the openings of the sleeve and of the drilling spindle are superimposed.
- Loosen the taper mandrel of the quick-action drill chuck with the help of a drill drift.

## 4.7.2 Assembly quick- action drill chuck

The quick-action drill chuck is secured through a form-fit union (pulling heel) against twisting in the drilling spindle.

A friction-locking union holds and centres the quick-action drill chuck with the taper mandrel in the drilling spindle.

Img.4-6: Taper mandrel

- Check and, if necessary, clean the conical seat in the drilling spindle and at the taper mandrel of the tool or the quick-action drill chuck.
- Press the taper mandrel into the drilling spindle.

## 4.8 Cooling

The friction generated during rotation can cause the edge of the tool to become very hot.

The tool should be cooled during the drilling process. Cooling the tool with a suitable cooling lubricant ensures better working results and a longer edge life of the tools. This is best realised by a separate cooling equipment. If there is no cooling equipment included in the delivery volume, you can cool by means of a spray gun or a washing bottle.

### ATTENTION!

**Danger of injury due to brushes getting caught or pulled in. Use a spray gun or a washing bottle for cooling.**

### INFORMATION

Use a water-soluble and non-pollutant drilling emulsion as a cooling agent. This can be acquired from authorised distributors.

Make sure that the cooling agent is being collected.

Respect the environment when disposing of lubricants and coolants.

Follow the manufacturer's disposal instructions.

## 4.9 Before starting work

Before starting work, select the desired speed. This will depend on the diameter of the bit being used and the material.

☞ "Speed change" on page 33

## WARNING!

**For drilling jobs, it is necessary to clamp the workpiece firmly to prevent the bit catching on the pieces. A machine vice or clamping claws is a suitable clamping device.**

Put a wooden or plastic board beneath the workpiece to avoid drilling through to the work table, vice, etc.

If necessary, adjust the desired drilling depth with the drill depth stop to obtain a constant result.

When working with wood, make sure to use an adequate dust extraction unit, as sawdust can constitute a health hazard. Wear a suitable dust mask when performing works at which dust is generated.

## 4.10 During work

The spindle sleeve is advanced by means of the star wheel. Make sure that the feed is constant and not too fast.

The spindle sleeve is returned to its initial position by the return spring.

## WARNING!

**Seizing of clothes and / or hair.**

- Make sure to wear well-fitting clothing during drilling work.
- Do not use gloves.
- If necessary, use a hairnet.

## CAUTION!

**Danger of bumps from the levers on the star wheel. Do not release the star wheel when repositioning the drilling spindle sleeve.**

The smaller the bit the more easily it may break. In the case of deep drilling, remove the bit from time to time to remove filings from the drill. Add a few drops of oil to reduce friction and prolong the service life of the bit.

## CAUTION!

**Danger of crushing. Do not place your hand between the drilling head and the spindle sleeve.**

## 5 Maintenance

In this chapter you will find important information about

- Inspection
  - Maintenance
  - Repair
- of the drilling machine.

### ATTENTION!

Properly performed regular maintenance is an essential prerequisite for

- operational safety,
- failure-free operation,
- long durability of the drilling machine and
- the quality of the products which you manufacture.

Installations and equipment from other manufacturers must also be in good order and condition.

### 5.1 Safety

#### WARNING!

The consequences of incorrect maintenance and repair work may include:

- Very serious injury to personnel working on the drilling machine,
- Damage to the drilling machine.

Only qualified personnel should carry out maintenance and repair work on the drilling machine.

#### 5.1.1 Preparation

##### WARNING!

Only carry out work on the drilling machine if it has been disconnected from the mains power supply.

☞ "Disconnecting and securing the drilling machine" on page 17

Attach a warning sign.

#### 5.1.2 Restarting

Before restarting, run a safety check.

☞ "Safety check" on page 15

##### WARNING!

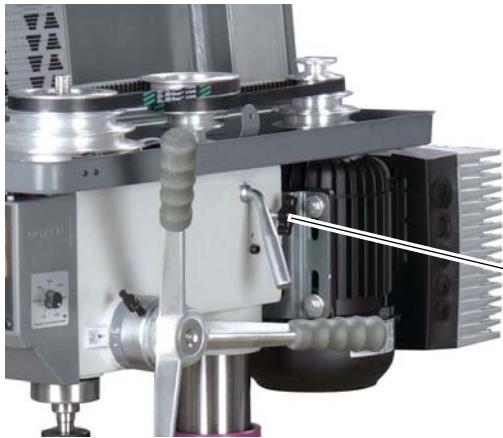

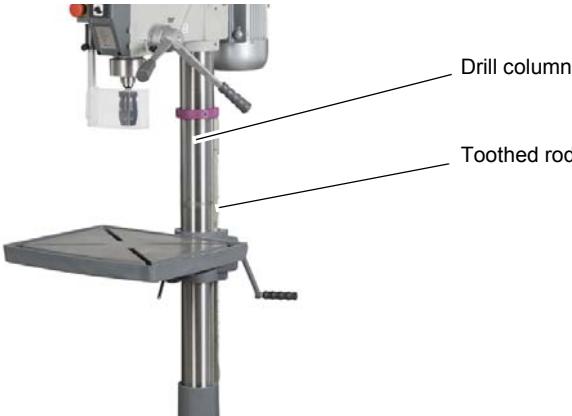

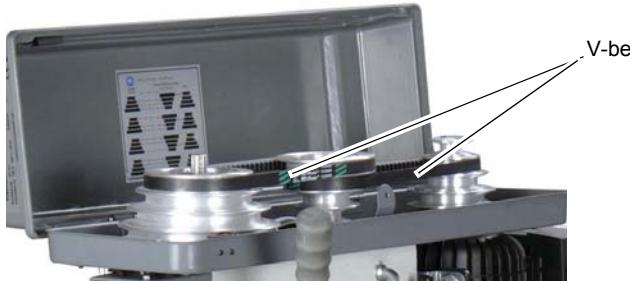

Before activating the drilling machine, double check that this will not

- no dangers generated for persons,
- the drilling machine is not damaged.

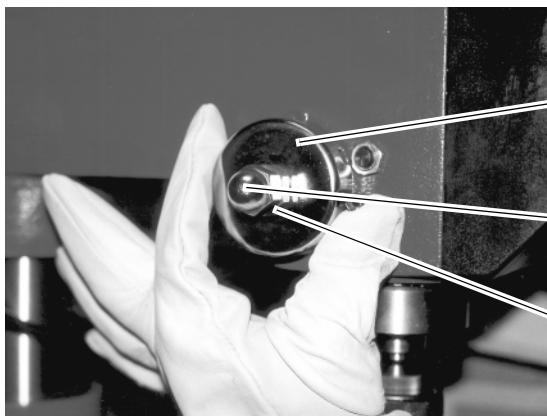

### 5.2 Inspection and Maintenance

The type and level of wear depends to a large extent on the individual usage and operating conditions.

Interval	Where?	What?	How?
Start of shift after every maintenance or repair work	Drilling machine		☞ "Safety check" on page 15
Weekly	Slide rail screws	Loosening	<ul style="list-style-type: none"> <li>→ Check if the slide rail screws for the V-belt tension on the left and right side of the drilling head are well fastened.</li> <li>→ Check if the V-belts are well tightened. Checking the tension of V-belts, ☞ "Speed change" on page 33.</li> </ul>  <p>Slide rail screws right-hand side</p>
Every month	Drill column and toothed rack	Lubricate	<ul style="list-style-type: none"> <li>→ Lubricate the drill column regularly with commercial oil.</li> <li>→ Lubricate the rack regularly with commercial grease (e.g. friction bearing grease).</li> </ul>  <p>Drill column Toothed rod</p>
every six months	V-belts at the drill head	Visual inspection	<ul style="list-style-type: none"> <li>→ Check whether the V-belts have become porous and worn.</li> </ul>  <p>V-belt</p> <p>Abb. 5-1: V-belt housing</p>

Interval	Where?	What?	How?
every six months	Electronics	Testing	<p>Check the electrical equipment / parts of the drilling machine.</p> <p>☞ "Qualification of personnel" on page 12</p>
As required	Drill depth stop	Spindle return spring	<ul style="list-style-type: none"> <li>→ Loosen both nuts on the spring housing, approximately 1/4 counter-clockwise rotation. Under no circumstances must the nuts be completely removed from the screw thread!</li> <li>→ Hold the spring housing with one hand, while using the other hand to slowly remove the housing.</li> <li>→ Rotate the spring housing about its own axis until the pin snaps into the next notch.</li> </ul>  <p>Abb. 5-2: Spindle return spring</p> <p><b>INFORMATION</b></p> <p>If the tension has increased, rotate the housing clockwise and if the tension has decreased rotate the housing counter-clockwise.      Ensure that the notch is always snapped into the spring housing properly and subsequently tighten the nut.      The second nut secures the first nut (capped nut).      When the nuts have been tightened they should not touch the return spring housing.</p>

## 5.3 Repair

### 5.3.1 Customer service technician

For any repair work request the assistance of an authorised customer service technician. Contact your specialist dealer if you do not have customer service's information or contact Stürmer Maschinen GmbH in Germany who can provide you with a specialist dealer's contact information. Optionally, the

Stürmer Maschinen GmbH

Dr.-Robert-Pfleger-Str. 26

D- 96103 Hallstadt

can provide a customer service technician, however, the request for a customer service technician can only be made via your specialist dealer.

If the repairs are carried out by qualified technical personnel, they must follow the indications given in these operating instructions.

Optimum Maschinen Germany GmbH accepts no liability nor does it guarantee against damage and operating malfunctions resulting from failure to observe these operating instructions.

For repairs only use

- faultless and suitable tools,
- original parts or parts from series expressly authorised by Optimum Maschinen Germany GmbH.

## 6 Determining the cutting speed and the speed

### 6.1 Table cutting speeds / infeed

Material table							
Material to be processed		Recommended cutting speed <b>Vc</b> in m/min	Recommended infeed <b>f</b> in mm/revolution				
			Drill bit diameter <b>d</b> in mm				
			2...3	>3...6	>6...12	>12...25	>25...50
Unalloyed construction steels < 700 N/mm <sup>2</sup>	30 - 35	0.05	0.10	0.15	0.25	0.35	
Alloyed construction steels > 700 N/mm <sup>2</sup>	20 - 25	0.04	0.08	0.10	0.15	0.20	
Alloyed steels < 1000 N/mm <sup>2</sup>	20 - 25	0.04	0.08	0.10	0.15	0.20	
Steels, low stability < 800 N/mm <sup>2</sup>	40	0.05	0.10	0.15	0.25	0.35	
Steel, high stability > 800 N/mm <sup>2</sup>	20	0.04	0.08	0.10	0.15	0.20	
non-rust steels > 800 N/mm <sup>2</sup>	12	0.03	0.06	0.08	0.12	0.18	
Cast iron < 250 N/mm <sup>2</sup>	15 - 25	0.10	0.20	0.30	0.40	0.60	
Cast iron > 250 N/mm <sup>2</sup>	10 - 20	0.05	0.15	0.25	0.35	0.55	
CuZn alloy brittle	60 - 100	0.10	0.15	0.30	0.40	0.60	
CuZn alloy ductile	35 - 60	0.05	0.10	0.25	0.35	0.55	
Aluminum alloy up to 11% Si	30 - 50	0.10	0.20	0.30	0.40	0.60	
Thermoplastics	20 - 40	0.05	0.10	0.20	0.30	0.40	
Thermosetting materials with organic filling	15 - 35	0.05	0.10	0.20	0.30	0.40	
Thermosetting materials with anorganic filling	15 - 25	0.05	0.10	0.20	0.30	0.40

### 6.3 Examples to calculatory determine the required speed for your drilling machine

The necessary speed is depending on the diameter of the drill bit, on the material which is being machined as well as on the cutting material of the drill bit.

Material which needs to be drilled: St37

Cutting material (drill bit): HSS spiral bit

Set point of the cutting speed [V<sub>c</sub>] according to the table: 40 meters per minute

Diameter [d] of your drill bit: 30 mm = 0,03 m [meters]

Selected infeed [f] according to the table: about 0.35 mm/rev

$$\text{Speed } n = \frac{v_c}{\pi \times d} = \frac{40 \text{ m}}{\text{min} \times 3,14 \times 0,03 \text{ m}} = 425(\text{rpm})$$

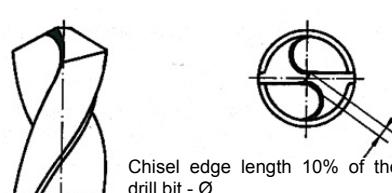

Set a speed on your drilling machine which is less than the determined speed.

#### INFORMATION

In order to facilitate the production of larger drill holes they need to be pre-drilled. This way, you reduce the cutting forces and improve the guiding of the drill bit.

The pre-drilling diameter is depending on the length of the chisel edge. The chisel edge does not cut, but it squeezes the material. The chisel edge is positioned at an angle of 55° to the major cutting edge.

As a general rule of thumb it applies: The pre-drilling diameter is depending on the length of the chisel edge.

#### Recommended working steps for a drilling diameter of 30 mm

Example:

1st working step: Pre-drilling with Ø 5 mm.

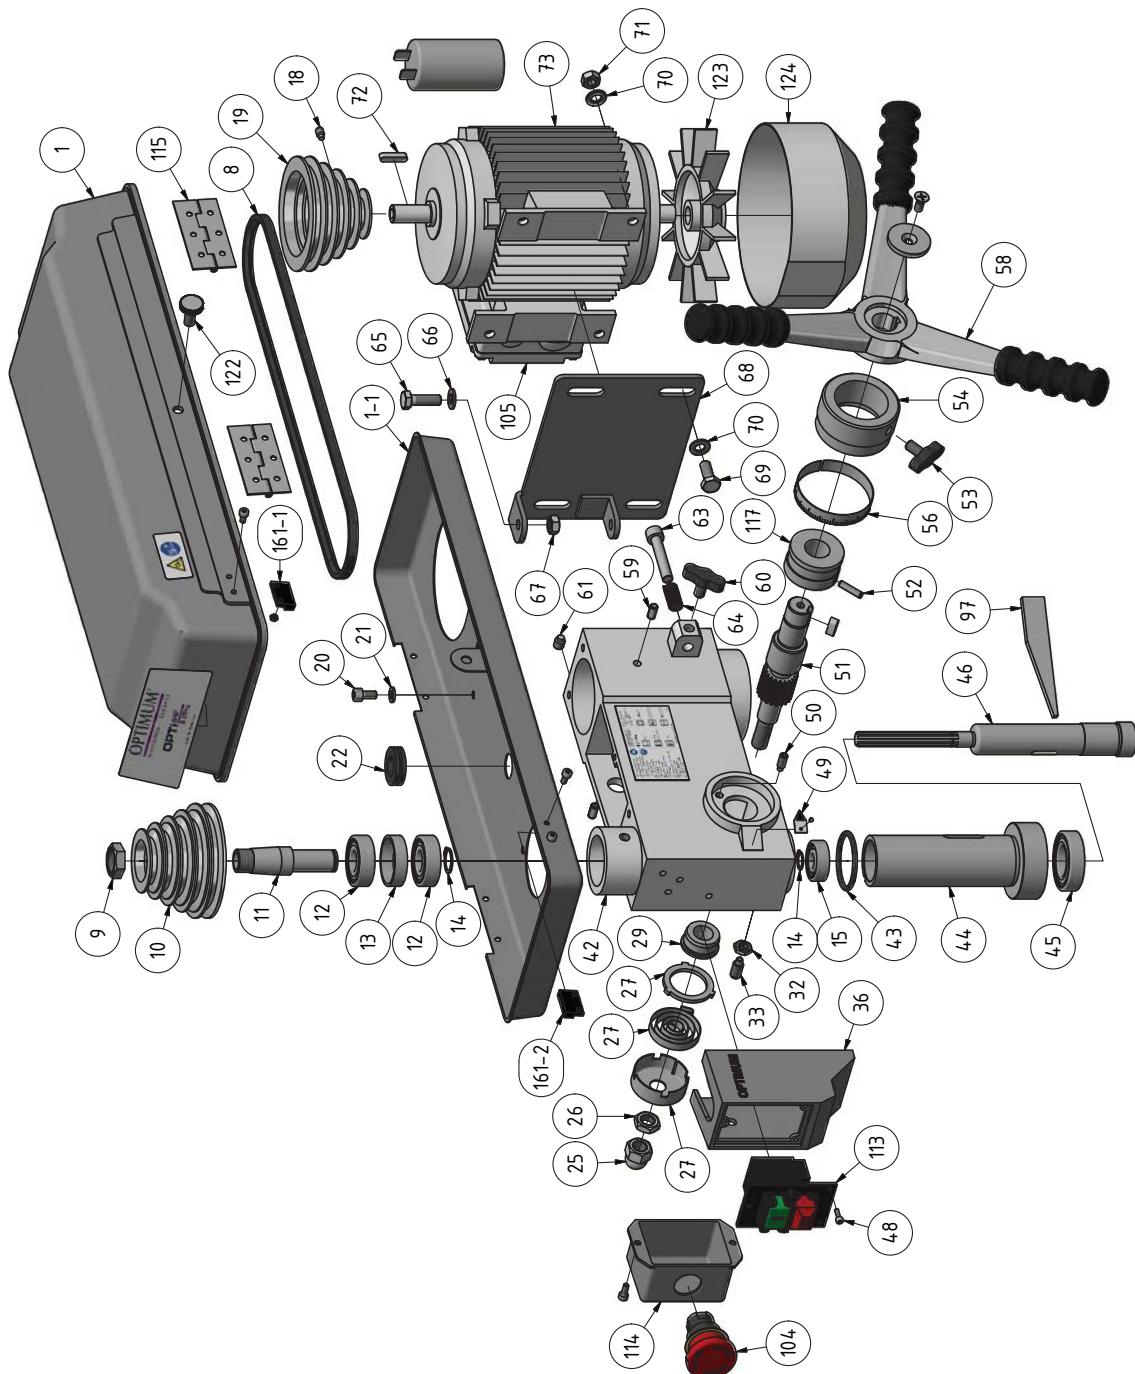

2nd working step: Pre-drilling with Ø 15 mm.

3rd working step: Drilling with Ø 30 mm.

## 8 Malfunctions

### 8.1 Malfunctions on the drilling machine

Malfunction	Cause/ possible effects	Solution
Release of the FI protected switch	<ul style="list-style-type: none"> <li>an unusual FI protective switch is being used</li> </ul>	<ul style="list-style-type: none"> <li>"Electrical connection" on page 29</li> </ul>
Noise during work.	<ul style="list-style-type: none"> <li>Spindle turning dry</li> <li>Tool blunt or incorrectly secured</li> </ul>	<ul style="list-style-type: none"> <li>Grease spindle</li> <li>Use new tool and check securing (fixed setting of the bit, bit holder and chuck).</li> </ul>
Drill bit "burnt"	<ul style="list-style-type: none"> <li>Incorrect speed</li> <li>Chips do not come out of the bore hole.</li> <li>Blunt drill bit.</li> <li>Operating without cooling agent.</li> </ul>	<ul style="list-style-type: none"> <li>Select another rate, feed too high.</li> <li>Retract the drill bit from the bore hole more often.</li> <li>Sharpen the drill bit or insert new drill bit.</li> <li>Use cooling agent</li> </ul>
Drill point runs off, drilled hole is not circular.	<ul style="list-style-type: none"> <li>Hard fibre in wood or length of the cutting twist or the drill bit is uneven.</li> <li>Drill bit is bent.</li> </ul>	<ul style="list-style-type: none"> <li>Use a new drill bit.</li> </ul>
Drill bit defective.	<ul style="list-style-type: none"> <li>No base / support used.</li> </ul>	<ul style="list-style-type: none"> <li>Place a piece of wood underneath the workpiece and fasten this to the workpiece.</li> </ul>
Drill bit runs unround or wobbles.	<ul style="list-style-type: none"> <li>Drill bit is bent.</li> <li>Worn bearing on boring head.</li> <li>Drill is not correctly clamped.</li> <li>Drill chuck defective</li> </ul>	<ul style="list-style-type: none"> <li>Replace drill bit</li> <li>Have the bearing on the boring head replaced.</li> <li>Set the correct tension to the drill bit.</li> <li>Exchange the drill chuck.</li> </ul>
The drill chuck or the taper mandril cannot be inserted.	<ul style="list-style-type: none"> <li>Dirt, grease or oil on the taper inside of the drill chuck or on the taper surface of the drill spindle</li> </ul>	<ul style="list-style-type: none"> <li>Clean the surfaces accurately</li> <li>Keep surfaces free of grease</li> </ul>
Motor does not start	<ul style="list-style-type: none"> <li>Motor is wrongly connected</li> <li>Defective fuse</li> </ul>	<ul style="list-style-type: none"> <li>Have it checked by authorised personnel.</li> </ul>
Motor is overheating and there is no power	<ul style="list-style-type: none"> <li>Motor overloaded</li> <li>Too low mains voltage</li> <li>Motor is wrongly connected</li> </ul>	<ul style="list-style-type: none"> <li>Disconnect immediately and have the equipment checked by a trained specialist</li> </ul>
Precision of the work deficient	<ul style="list-style-type: none"> <li>Heavy and unbalanced or deformed work-piece</li> <li>Inexact horizontal position of the work-piece holder</li> </ul>	<ul style="list-style-type: none"> <li>Balance the piece statically and secure without straining</li> <li>Adjust workpiece-holder</li> </ul>
Drilling spindle sleeve does not return to its initial position	<ul style="list-style-type: none"> <li>Spindle return spring</li> </ul>	<ul style="list-style-type: none"> <li>"Spindle return spring" on page 44</li> </ul>

## 9 Appendix

### 9.1 Copyright

This document is protected by copyright. All derived rights are reserved, especially those of translation, re-printing, use of figures, broadcast, reproduction by photo-mechanical or similar means and recording in data processing systems, either partial or total.

Subject to technical changes without notice.

### 9.2 Terminology/Glossary

Term	Explanation
Drill sleeve	Fixed hollow shaft in which the drilling spindle turns
Drilling spindle	Shaft activated by the motor
Quick-action drill chuck	Drill chuck can be fixed by hand.
Drill chuck	Drill bit adapter
Drill drift	Tool to release the bit or the drill chuck from the drill spindle
Taper mandrel	Cone of the drill or of the drill chuck
Tool	Milling cutter, drill bit, countersink, etc.
Workpiece	Piece to be drilled or machined.
Drilling table	Supporting surface, clamping surface
Drill head	upper part of the drilling machine
Star wheel	Manual operation for the drill feed

### 9.3 Change information operating manual

Chapter	Short summary	new version number
EC declaration	changed standard	1.2.9
all	Merging of standard + Vario	2.0
3	Figure of spindle protection switch	2.0.1
1 + 4	Type plates + speed table added	2.0.2
3	Electrical connection, Advanced information on frequency converters.	2.1.0
4	Updated speed tables	2.1.0
7	updated spare parts drawings	2.1.0
CE + 3.1 + 4.7	CE declaration + Röhmk + drill chuck	2.1.1
1, 4, parts	EMC categories, Updating the spare parts list (09 / 2018), ~60Hz speed tables	2.1.2

#### 9.4 Liability claims for defects / warranty

Beside the legal liability claims for defects of the customer towards the seller, the manufacturer of the product, OPTIMUM GmbH, Robert-Pfleger-Straße 26, D-96103 Hallstadt, does not grant any further warranties unless they are listed below or were promised in the framework of a single contractual provision.

- The processing of the liability claims or of the warranty is performed as chosen by OPTIMUM GmbH either directly or through one of its dealers.  
Any defective products or components of such products will either be repaired or replaced by components which are free from defects. Ownership of replaced products or components is transferred to OPTIMUM Maschinen Germany GmbH.
- The automatically generated original proof of purchase which shows the date of purchase, the type of machine and the serial number, if applicable, is the precondition in order to assert liability or warranty claims. If the original proof of purchase is not presented, we are not able to perform any services.
- Defects resulting from the following circumstances are excluded from liability and warranty claims:
  - Using the product beyond the technical options and proper use, in particular due to overstraining of the machine.
  - Any defects arising by one's own fault due to faulty operations or if the operating manual is disregarded.
  - Inattentive or incorrect handling and use of improper equipment
  - Unauthorized modifications and repairs
  - Insufficient installation and safeguarding of the machine
  - Disregarding the installation requirements and conditions of use
  - atmospheric discharges, overvoltage and lightning strokes as well as chemical influences
- The following items are also not subject to liability or warranty claims:
  - Wearing parts and components which are subject to a standard wear as intended such as e.g. V-belts, ball bearings, illuminants, filters, sealings, etc.
  - Non reproducible software errors
- Any services, which OPTIMUM GmbH or one of its agents performs in order to fulfil any additional warranty are neither an acceptance of the defects nor an acceptance of its obligation to compensate. Such services neither delay nor interrupt the warranty period.
- Place of jurisdiction for legal disputes between businessmen is Bamberg.
- If one of the aforementioned agreements is totally or partially inoperative and/or invalid, a provision closest to the intent of the warrantor is considered agreed upon, which remains within the framework of the limits of liability and warranty which are specified by this contract.

## 9.5 Storage

### ATTENTION!

Incorrect and improper storage might result in damage or destruction of electrical and mechanical machine components.

Store packed and unpacked parts only under the intended environmental conditions.

Follow the instructions and information on the transport box:

- Fragile goods  
(Goods require careful handling)

- Protect against moisture and humid environment  
☞ "Environmental conditions temperature" on page 20

- Prescribed position of the packing case  
(Marking the top surface - arrows pointing up)

- Maximum stacking height  
Example: not stackable - do not stack further packing case on top of the first one.

Consult Optimum Maschinen Germany GmbH if the machine and accessories are stored for more than three months or are stored under different environmental conditions than those specified here .

## 9.6 Advice for disposal / Options of re-use

Please dispose of your machine in an environmentally friendly way, not by disposing of the waste not in the environment, but by acting in a professional way.

Please neither throw away the packaging nor the used machine later on, but dispose of them according to the guidelines established by your city council/municipality or by the corresponding waste management enterprise.

### 9.6.1 Decommissioning

**CAUTION!**

**Immediately decommission used machines in order to avoid later misuse and endangering of the environment or of persons.**

- Pull off the main plug.
- Cut the connection cable.
- Remove all environmentally hazardous operating fluids from the used device.
- If applicable remove batteries and accumulators.
- Disassemble the machine if required into easy-to-handle and reusable assemblies and component parts.
- Dispose of machine components and operating fluids using the intended disposal methods.

### 9.6.2 Disposal of new device packaging

All used packaging materials and packaging aids from the machine are recyclable and generally need to be supplied to the material reuse.

The packaging wood can be supplied to the disposal or the reuse.

Any packaging components made of cardboard box can be chopped up and supplied to the waste paper collection.

The films are made of polyethylene (PE) and the cushion parts are made of polystyrene (PS). These materials can be reused after reconditioning if they are passed to a collection station or to the appropriate waste management enterprise.

Only forward the packaging materials correctly sorted to allow direct reuse.

### 9.6.3 Disposing of the old device

**INFORMATION**

Please take care in your interest and in the interest of the environment that all component parts of the machine are only disposed of in the intended and admitted way.

Please note that the electrical devices comprise a variety of reusable materials as well as environmentally hazardous components. Please ensure that these components are disposed of separately and professionally. In case of doubt, please contact your municipal waste management. If appropriate, call on the help of a specialist waste disposal company for the treatment of the material.

### 9.6.4 Disposal of electrical and electronic components

Please make sure that the electrical components are disposed of professionally and according to the statutory provisions.

The machine is composed of electrical and electronic components and must not be disposed of as household waste. According to the European Directive 2011/65/EU regarding electrical and electronic used devices and the implementation of national legislation, used power tools and electrical machines need to be collected separately and supplied to an environmentally friendly recycling centre.

As the machine operator, you should obtain information regarding the authorised collection or disposal system which applies for your company.

Please make sure that the electrical components are disposed of professionally and according to the legal regulations. Please only throw depleted batteries in the collection boxes in shops or at municipal waste management companies.

## 9.6.5 Disposal of lubricants and coolants

### ATTENTION!

Please imperatively make sure to dispose of the used coolant and lubricants in an environmentally compatible manner. Observe the disposal instructions of your municipal waste management companies.

### INFORMATION

Used coolant emulsions and oils should not be mixed since it is only possible to reuse oils without pre-treatment when they have not been mixed.

The disposal instructions for used lubricants are made available by the manufacturer of the lubricants. If necessary, request the product-specific data sheets.

## 9.7 Disposal via municipal collection facilities

Disposal of used electrical and electronic components

(Applicable in the countries of the European Union and other European countries with a separate collecting system for those devices).

The sign on the product or on its packing indicates that the product must not be handled as common household waste, but that it needs to be disposed of at a central collection point for recycling. Your contribution to the correct disposal of this product will protect the environment and the public health. Incorrect disposal constitutes a risk to the environment and public health. Recycling of material will help reduce the consumption of raw materials. For further information about the recycling of this product, please consult your District Office, the municipal waste collection station or the shop where you have bought the product.

## 9.8 RoHS, 2011/65/EU

The symbol on the product or on its packing indicates that this product complies with the European directive 2011/65/EU.

## 9.9 Product follow-up

We are required to perform a follow-up service for our products which extends beyond shipment.

We would be grateful if you could send us the following information:

- Modified settings
- experiences with the bench drill and upright drill, which could be important for other users
- Recurring failures

## EC - Declaration of Conformity

according to Machinery directive 2006/42/EC, Annex II 1.A

The manufacturer / distributor      Optimum Maschinen Germany GmbH  
Dr.-Robert-Pfleger-Str. 26  
D - 96103 Hallstadt, Germany

hereby declares that the following product

**Product designation:**      Drilling machine

**Type designation:**      B17 Pro ; B23 Pro ; B26 Pro ; B33 Pro

**Year of manufacture:**      20\_\_

fulfills all the relevant provisions of the directive specified above and the additionally applied directives (in the following) - including the changes which applied at the time of the declaration.

**Description:**

Hand-controlled drilling machine.

**The following additional EU directives have been applied:**

EMC Directive 2014/30/EU

**The following harmonized standards were applied:**

EN 12717: 2001 - Machine tools - Safety - Drilling machines

EN 60204-1 - Safety of machinery - Electrical equipment of machines - Part 1: General requirements

EN 13849-1:2015 - Safety of machinery - Safety related parts of controls - Part 1: General design principles

EN 13849-2:2012 - Safety of machinery - Safety related parts of controls - Part 2: Validation

EN ISO 12100:2013 - Safety of machinery - General principles for design - Risk assessment and risk reduction

Kilian Stürmer, phone: +49 (0) 951 96555 - 800

Kilian Stürmer (CEO, General Manager)

Hallstadt, 2017-07-12

## EC - Declaration of Conformity

according to Machinery directive 2006/42/EC, Annex II 1.A

**The manufacturer / distributor** Optimum Maschinen Germany GmbH  
Dr.-Robert-Pfleger-Str. 26  
D - 96103 Hallstadt, Germany

hereby declares that the following product

**Product designation:** Drilling machine

**Type designation:**  
B23 Pro Vario  
B26 Pro Vario  
B33 Pro Vario

**Year of manufacture:** 20\_\_

fulfills all the relevant provisions of the directive specified above and the additionally applied directives (in the following) - including the changes which applied at the time of the declaration.

**Description:**

Hand-controlled drilling machine.

**The following additional EU directives have been applied:**

EMC Directive 2014/30/EU

**The following harmonized standards were applied:**

EN 12717: 2001 - Machine tools - Safety - Drilling machines

EN 60204-1 - Safety of machinery - Electrical equipment of machines - Part 1: General requirements

EN 1837:1999+A1:2009 - Safety of machinery - Integral lighting of machines

EN 13849-1:2015 - Safety of machinery - Safety related parts of controls - Part 1: General design principles

EN 13849-2:2012 - Safety of machinery - Safety related parts of controls - Part 2: Validation

EN ISO 12100:2013 - Safety of machinery - General principles for design - Risk assessment and risk reduction

EN 50370-2 - Electromagnetic compatibility (EMC) - Product family standard for machine tools - Part 2: Immunity

EN 55011 (CISPR 11) - Industrial, scientific and medical equipment - Radio-frequency disturbance characteristics - Limits and methods of measurement - class A

EN 61000-6-3:-2 - Electromagnetic compatibility (EMC) - Part 3-2: Limits - Limits for harmonic current emissions (equipment input current <= 16 A per phase)

EN 61000-6-3:-3 - Electromagnetic compatibility (EMC) - Part 3-3: Limits - Limitation of voltage changes, voltage fluctuations and flicker in public low-voltage supply systems, for equipment with rated current <= 16 A per phase and not subject to conditional connection
